Time-Series Agent
Reader's guide
§ 1 Introduction
Motivation and scope
Construction questions
§ 2 What Is a Time-Series Agent?
Agent interaction loop
Tasks and module reuse
§ 3 LLM-Side Contributions
Model interfaces
Temporal adaptation
Workflow policies
§ 4 General Harness
Interfaces, tools, memory
Control, plans, learning, roles
§ 5 General Time-Series Harness
Data management
Temporal processing
Context and memory
Temporal validation
§ 6 Task-Specific Harness
Forecasting
Augmentation
Anomaly diagnosis
Decision support
§ 7 Infrastructure and Benchmarks
ModernTSF
TimeSeriesGym
Traces and episodes
Evaluation
§ 8 Open Problems and System Analyses
Transfer and memory
Evidence quality
Decision feedback
Design implications
§ 9 Conclusion
Construction choices
Evaluation and reuse

Figure 15

Open question	Controlled comparison			Evidence to record
Perception or execution	Model judgment	vs.	Numerical tool	Numerical error Execution cost
Memory under change	**Release v_1** Prior evidence	→	**Release v_2** Revised values	Revalidation Updated conclusions
Procedure transfer	Seen setting	vs.	Held-out setting	Held-out performance Reuse success
Evidence sensitivity	Evidence present	vs.	Evidence removed	Response to removal Grounded claims
Prediction to decision	Forecast	→	Inventory action	Forecast error Action utility

Match the backbone, information boundary and resource budget
