
Foundations
§1 Introduction
construction question · taxonomy · contributions
§2 What Is a Time Series Agent?
definition · scope of inclusion · layer assignment
Components
LLMs
Harness architectures, from general to specific
§3 LLM-Side
temporal representation
instruction and reasoning
workflow learning
§4 General Harness
interface and interaction
memory and context
tools and execution
planning and orchestration
optimization and evolution
§5 General Time Series Harness
data management
temporal processing
context and memory
temporal validation
§6 Task-Specific Harness
forecasting
synthesis
anomaly diagnosis
decision support
Evaluation
§7 Infrastructure and Benchmarks
evaluation contract · benchmark landscape · temporal question answering · reproducible infrastructure · benchmark selection
Outlook
§8 Open Problems and System Analyses
reusable temporal infrastructure · open problems · design implications
§9 Conclusion
design judgments · alignment of the three parts
