(a) Tasks and temporal functions

	Forecasting and prediction	Augmentation and synthesis	Anomaly detection and diagnosis	Decision support
Data management	History & covariates	Series & conditions	Streams & logs	Observations & actions
Temporal processing	Forecast windows	Segment transforms	Changes & relations	Decision windows
Context and memory	Events & cases	Reference examples	Incident history	Action history
Temporal validation	Information cutoff	Structure & fidelity	Location & evidence	Evidence at action time

(b) Demand forecasting and inventory decisions
