Contribution layers in Time-Series Agents

LLM capabilities combine with three Harness scopes to support temporal tasks.

LLM side

LLM interaction

interpret observations
select tool actions
use returned feedback
temporal adaptation

Action-selection model

Model contribution interfaces and training

Time-Series Agent

General Harness

tools · memory · control · planning · coordination

General Time-Series Harness

temporal state · operations
provenance · validation

Task-Specific Harness

forecasting
augmentation
anomaly · decisions

Evaluation and evidence

Benchmark contract

episodes
chronology
held-out tests
reproducible traces

module-level counts

Each paper can contribute several modules

General Harness ⊃ General Time-Series Harness ⊃ Task-Specific Harness
