Controlled comparisons for reusable Time-Series Agents

Perception and execution

Model judgment vs. tool use

Accuracy, grounding and cost

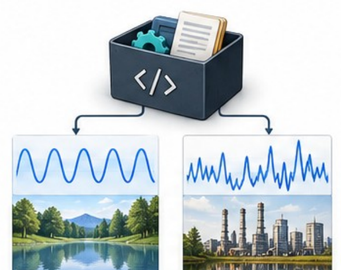

Memory under change

Old vs. revised evidence

Revalidate, revise or retire

Procedure transfer

Seen vs. held-out setting

Transfer across tasks and regimes

Evidence sensitivity

Supporting evidence vs. removal

Does the conclusion change?

Prediction to decision

Forecast quality vs. action utility

Costs, constraints and repeated actions

Match the backbone and resource budget while varying the factor under study
