

model-side representation and reasoning

retrieval → generation → review → downstream use

Temporal fidelity: dependence, missingness, distribution | Utility: downstream task performance

training and feedback update the detector, diagnostic tools, and review policy

Evidence acquisition

retrieve signals and context

Evidence construction

align and summarize evidence

Anomaly detection

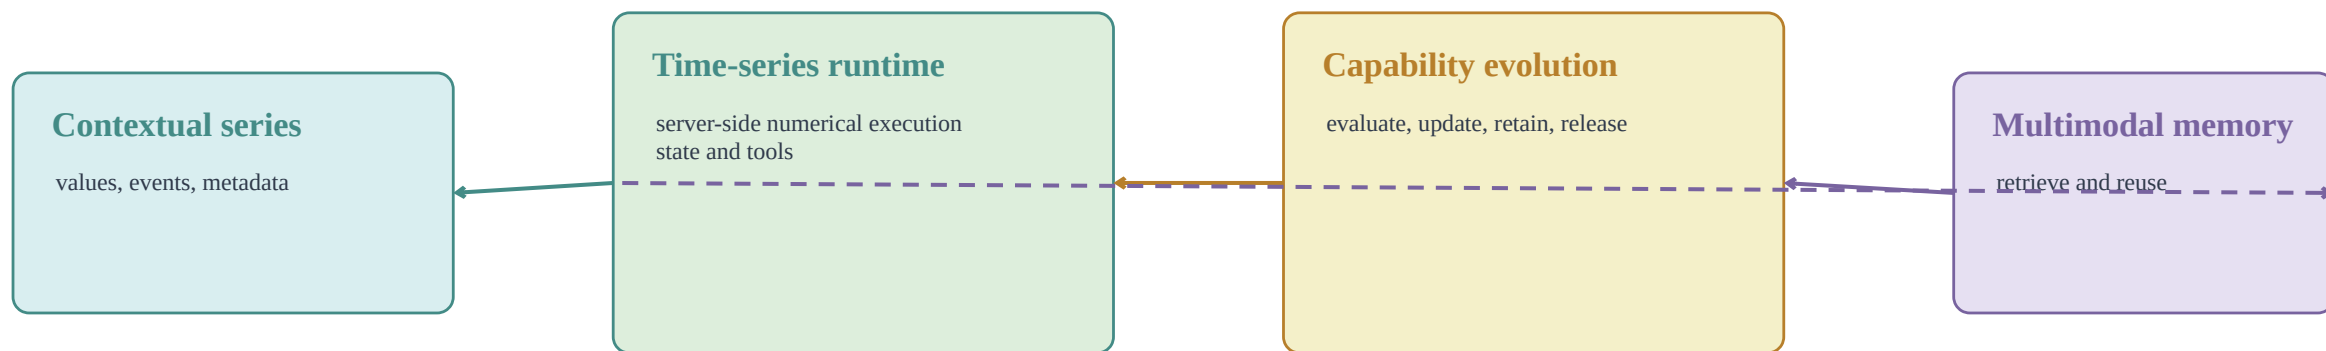

score candidate events

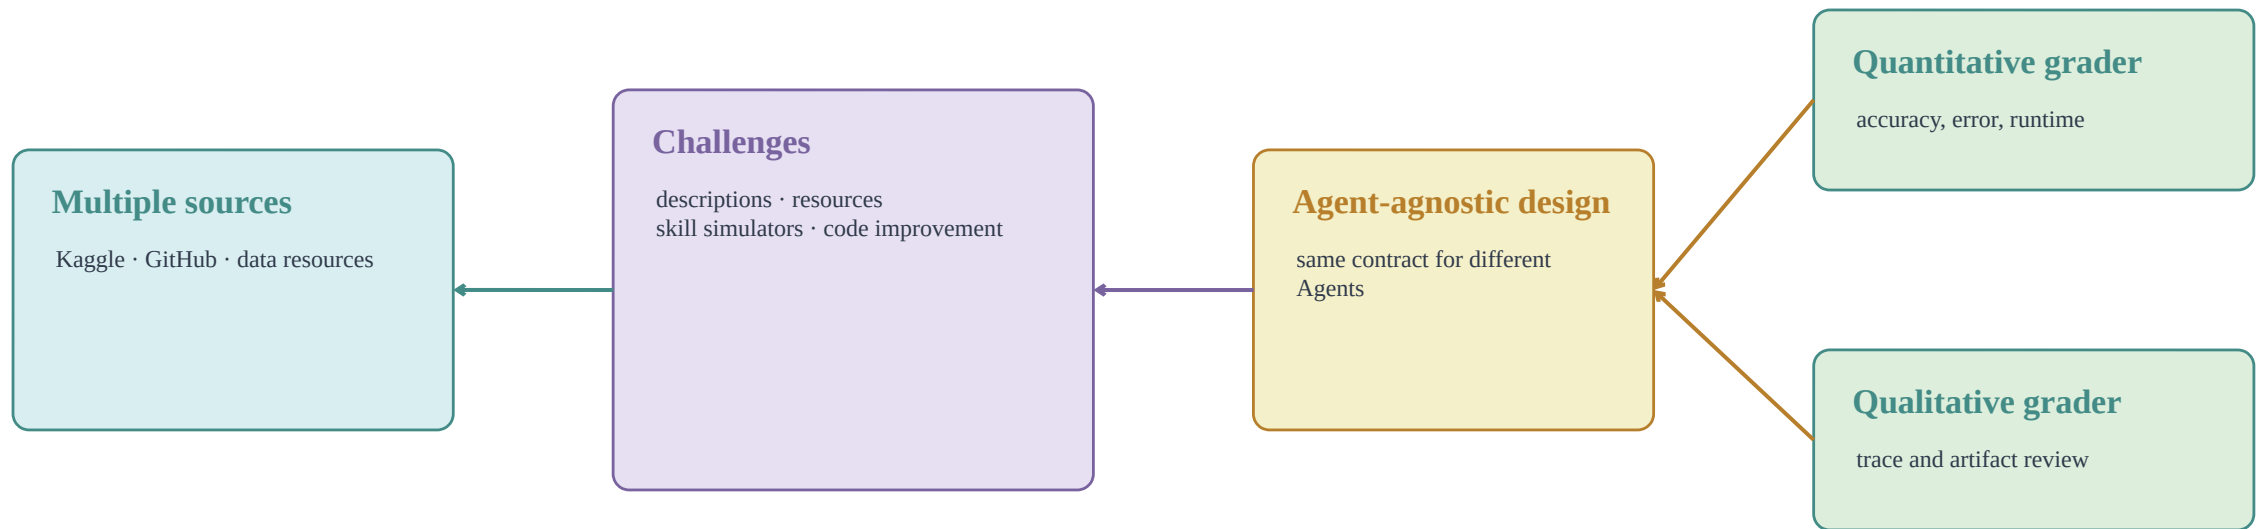

Diagnosis

identify cause and confidence

toolkit: time-series memory · numerical diagnostics · event labels · evaluator

auditable trajectories close the loop

multimodal outputs
files · models · code

observe → execute → critique → verify
